

PARKS, TRAILS & OPEN SPACES

CASE
EMERGENCY SYSTEMS

***LANDMARK EMERGENCY
COMMUNICATION SOLUTIONS***

The great outdoors can be an excellent place to escape, but without reliable communications available, “getting out there” can quickly turn to “trapped in the middle of nowhere.” The challenge for parks, trails, nature preserves, and campgrounds is that these destinations are difficult - if not impossible - to wire with electricity and phone lines. And, cell phones often lose service in remote destinations.

That’s why emergency communications units from CASE Emergency Systems are designed to provide one-touch 24/7 connection to visitors, hikers, joggers, bikers, sightseers, park staff, rangers, and more all without any wires. CASE Emergency Blue Light Towers, E-Phones, and Lexan Call Boxes are ideal for a number of park and outdoor destination needs:

- » Designated camp-site emergency phone
- » Non-critical injury/first-aid response on trails
- » Public safety/crime reporting with built-in GPS location services
- » Relay communications between ranger stations and main command center
- » Fire and flood early warning/reporting system
- » Wayfinding assistance/lost visitor guidance
- » Public address system for announcements or warnings

How CASE Works

No matter which of our products you choose for your outdoor location, all CASE equipment offers the same functionality and benefits.

No Digging Trenches. No Complicated Installations.

CASE units are available 100% wireless with solar power panels, a 10-day back-up battery, and choice of 4G cellular or satellite phone connectivity.

CASE wireless equipment is actually so easy to install, we can walk your grounds staff on-site maintenance team through it remotely.

Customized Connections.

You choose where users are routed when a CASE unit is activated. Units can dial 911, or can route to your aid stations, guest assistance, ranger outposts, on-site security teams, or anywhere else.

Durable in All Kinds of Weather

Stainless-steel housings and components are made to be weather and tamper resistant in rain, snow, heat, wind, and more. We've even had units survive being in the middle of wildfires and remain operational.

High-Visibility

CASE units are easy for people to find thanks to a bright blue strobe, and a broad range of bold exterior colors.

Additional Accessibility Options

To make sure your CASE units serve as many people as possible, you can add a TTY keypad and display and/or a faceplate camera to any product.

Public Address Capabilities

Adding an optional 4-way speaker allows you to activate any and all CASE units at your location to make announcements, warnings, or provide directions.

Self-Monitoring Maintenance

No need to engage maintenance teams in checking on CASE units — with the optional CASEAlert program, units perform scheduled self-checks and send reports to your central command team.

Upgrade Existing Call Boxes

If you're working with a legacy emergency calling system, it may be time to replace old lines or components. You may also simply want the added convenience and peace of mind that comes with solar power, a battery backup, and wireless connectivity.

Our retrofit kits are designed to add any or all of these options to an existing call box, and are compatible with multiple different brands.
